

LABEL FINDER BY ID

Save time finding label text when building SSRS Reports or X++ forms.

[enable your business]

What does the Label Finder by ID do?

- This tool retrieves label texts from AX using the label IDs. You would use this to speed up retrieving your label texts when creating forms or reports.

How do you run the Label Finder by ID tool?

- The download for this tool is an xpo containing a job called SSIfindLabelTextbyId.
- In the AOT import the xpo by going to the Command menu > Import.
 - A dialog will open asking you where the xpo file is located. Point it to the xpo for this tool.
- Once the class has been imported, in the AOT go to Jobs > SSIfindLabelTextbyId, right-click on the job and choose Open.
 - An infolog will appear showing information for the label SYS451. This information can easily be changed in the job to locate different label text.

Important notes:

- Comments have been used to attempt to explain what each value means (which is fairly intuitive).

What is in the download?

- An xpo containing the SSIfindLabelTextbyId job
