

TABLE LISTING REPORT

There are thousands of tables in Dynamics AX. This informational report provides all the tables and their descriptions.

[enable your business]

What does the AX 2012 R3 Table Listing Report do?

- This tool provides an organized list of the tables that exist in the AOT within Dynamics AX 2012.
 - Organize the listing by module based on the name of the tables
 - Fields are Table name, Table label text, Table ID, Configuration key, and Description (the developer documentation for the table)

How do you run the tool?

- The download for this tool is an xpo containing a menu item, and the X++ based report.
- In the AOT import the xpo by going to the Command menu > Import.
 - A dialog will open asking you where the xpo file is located. Point it to the xpo for this tool.
- Once the class has been imported, in the Shared Projects >> SSITableListingReportAX2012R3, right click on the menu item, and choose Open.
 - A dialog box will open asking you where to display the report

Important notes:

- This is an X++ based report, NOT an SSRS based report. This framework does still exist and function within AX 2012.
- There are no labels on a couple of fields in the report, nor on the menu item. This will cause best practice errors. You may create the labels as you see fit in your environment.

What is in the download?

- An xpo containing the SharedProject_SSITableListingReportAX2012R3 project
- A screenshot showing one page of the report output as an example of what is produced by the report
